SUPTO MOHAMMAD SABUR ISLAM KHAN

Senior Full-Stack Developer

Dhaka, Bangladesh • +8801620531802 • suptokhan24@gmail.com • LinkedIn • GitHub

PROFESSIONAL SUMMARY

Full-Stack Developer with 5+ years architecting scalable web and mobile ecosystems end to end — frontend (Angular, React), backend (Node.js, Laravel/PHP), databases (MySQL, MongoDB, Redis), and production infrastructure (VPS administration, Linux server management, performance tuning). Singlehandedly designed and built a 46+ module in-house Angular Learning Management System, delivered AI-driven automation that cut 100+ hours of manual content work monthly, and led a full-stack hybrid mobile strategy that cut mobile development cost by 80%. Comfortable owning a feature from database schema through UI to deployment.

FULL-STACK SKILLS

- **Front-End:** Angular (Expert, 5+ yrs), React, TypeScript, JavaScript (ES6+), HTML5/CSS3, Bootstrap, Ionic, Capacitor
- **Back-End:** Node.js, Laravel, PHP 8.x, Laravel Octane/Swoole, RESTful API design, Python
- **Data & Caching:** MySQL, MariaDB, MongoDB, Redis
- **AI & Automation:** Generative AI integration (Claude, GPT models), tool-calling architectures, LLM-powered content pipelines; daily use of Cursor, Claude Code, and Antigravity since 2024
- **Infrastructure & DevOps:** DigitalOcean VPS administration, aaPanel, OpenLiteSpeed, Nginx reverse proxy, OPcache/performance tuning, CI/CD, Git/GitHub
- **Payments:** Stripe, SSLCommerz, PayPal, Payoneer
- **Core Competencies:** System Design, Microservices, Agile/Scrum, Unit Testing (Jasmine/Karma), Firebase, Jira, Postman

PROFESSIONAL EXPERIENCE

Software Engineer (Remote) | LawSikho

New Delhi, India • 2022 – 2026

Key Achievement: Engineered 25+ full-stack applications — spanning frontend UI, backend services, and infrastructure — contributing to a 45% year-over-year revenue increase.

Full-Stack Platform Ownership

- Singlehandedly designed and built the flagship in-house Learning Management System — 46+ modules — owning the front end in Angular end to end, from UI conversion through full functionality and optimization.

AI & Generative Language Integration

- Architected a Transcript Generator and Teacher Analytics System using GPT models to convert text-to-video/audio and analyze student performance data, automating 100+ hours of manual content creation monthly.

Hybrid Mobile Strategy (Ionic/Capacitor)

- Led the "Write Once, Run Everywhere" initiative, converting the web platform into native Android/iOS apps using Angular + Ionic — cutting mobile development overhead by 80% while maintaining full feature parity; architected the structure and directed a subordinate developer through implementation.

SaaS Infrastructure & Microservices

- Push Notification Engine: built a configuration-free, API-driven notification service on Google Firebase, enabling cross-team implementation without backend friction.
- Proprietary Scheduling Engine: developed a custom "Book-a-Call" system (Calendly alternative) integrated directly into the sales CRM, eliminating third-party licensing costs.

Full-Stack Product Delivery

- Student Journey Portal: designed an end-to-end dashboard tracking the user lifecycle from registration through payment and course completion, improving retention transparency.
- Student Onboarding System: built an automated onboarding flow introducing new students to the platform and course structure.
- Revenue Tracking Module: built a historical reporting dashboard aggregating course-sales data — transactions, offers, and totals — with filterable views for the sales team.
- Job Portal: built a high-traffic employment platform (Glassdoor-style) connecting recruiters with legal talent.

Workflow Automation

- Optimized the Student Management System and Revenue Tracking modules — reducing report generation time by 70% and automating financial reconciliation by 40%.

Front-End Developer | Omicron IT LTD.

Dhaka, Bangladesh • 2020 – 2022

Key Achievement: Progressed from HTML/CSS implementation to lead Angular developer within the first few months, taking end-to-end ownership of an e-commerce platform for an Austria-based client.

- Joined with HTML, CSS, and JavaScript only — the first development role of my career; converted designer UI mockups into markup for the client's Angular-based e-commerce platform (a multi-vendor storefront with 36+ vendor accounts) [confirm platform name/spelling and vendor count before sending].
- Trained into Angular after ~2-3 months and became the platform's main developer, owning every requirement end to end: design conversion → HTML/CSS → Angular implementation → QA/testing → production release.
- Collaborated directly with Austria-based stakeholders using Jira and Kanban for requirement gathering, including sprint meetings, and contributed independent recommendations on UI/UX decisions.
- Orchestrated development across a distributed team spanning three time zones (US, Australia, Bulgaria) delivering enterprise web solutions.
- Developed modular, responsive applications using Angular and Bootstrap; enforced strict coding standards and component reusability.
- Implemented Test-Driven Development using Karma and Jasmine, significantly reducing production bugs and regressions.
- Integrated complex RESTful APIs, geolocation services, and HTML5 browser storage to build dynamic, location-aware applications.

EDUCATION

- B.Sc. in Computer Science & Engineering — Northern University Bangladesh (2021 – 2024)
- Diploma in Computer Technology — Munshiganj Polytechnic Institute (2015 – 2019)
